Dar es Salaam

January, 2009

#### Highlights

- ♦ The 2007/08 Final Food Crop Production Forecast amounts 10,872,336 tonnes grain equivalent and requirement for 2008/09 amounts 10,337,981 tonnes. In terms of cereals and non-cereals, a deficit status of 87% implying a shortage amounting 860,756 tonnes and a surplus status of 136% implying a surplus amounting 1,395,111 tonnes are expected respectively. In effect a net food situation involving the 2007/08 production is such that a self sufficiency ratio of 105% or a little surplus of 534,355 tonnes is achievable.
- ♦ Compared to previous season, production decline has been observed in sorghum (11%), banana (4%) and pulses (3%), due to poor rains in respect of late onset and early cessation, excessive rains/floods in some bimodal areas, soil degradation and pest prevalence. Nevertheless a marginal increase of approximately 2% in total food production is notable.
- ♦ An analysis of carry-over stocks (COS) shows that about 807,304 was available from three different sources viz. Private stocks (307,501 tonnes), Public stocks/ SGR (96,151 tonnes) and Farm retention (403,652 tonnes). Adding the COS to the above mentioned production surplus a total of 1,341,659 tonnes will be available over and above the amount satisfying national requirement for year 2008/09.
- ♦ As cautioned earlier vide preliminary forecast report, the forecast is sensitive to vuli performance. Based on this Final forecast, the 2008 Vuli season contributed 13% only of total production (vs normal 18% national perspective) or 24% only (vs 32% bimodal area perspective), showing a drawdown impact of about 536,134 tonnes.
- ♦ At sub-national level SSR analysis warns of 9 deficit regions. Furthermore, though self sufficient or surplus, further warnings are focused to 4 additional regions bearing pockets of food shortage. Excluding Dar es Salaam (which is largely non-agricultural), the 12 regions bear vulnerable population in 21 districts. The identified vulnerable areas will need to be subjected to an indepth vulnerability assessment for necessary intervention.
- ♦ Observant to current global food crisis manifested through soaring food prices, the produced food during 2007/08 should be prudently managed to avoid undesirable food shortage due to excessive trading and 'misuse' for non food purposes. Measures should be taken to improve utilization potential of a broader basket of foods including non-cereals to enhance food availability. Innovative practices such as blending of food crops should be pursued.

Table 1: National level Crop-wise Production versus Requirement and gap/surplus analysis

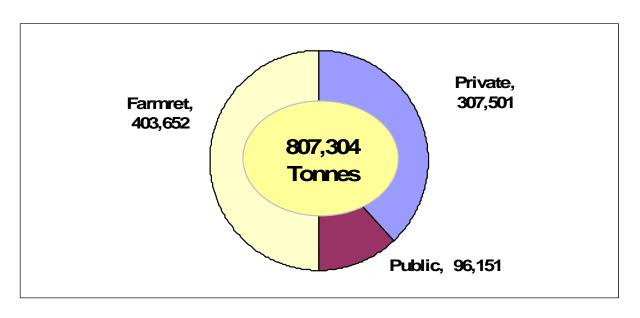

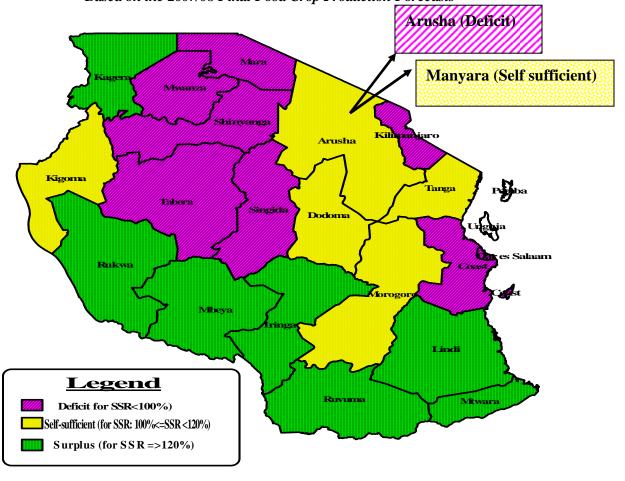

Figure 3:
Tanzania Food Supply Analysis and Self Sufficiency Ratio for 2008/09
Based on the 2007/08 Final Food Crop Production Forecasts

During the month of December, 2008 the National Food Security Division (Crop Monitoring and Early Warning) carried out a regular final food crop production forecast survey to ascertain food crop production status for 2007/08 and the corresponding availability for 2008/09.

The exercise involved finalizing the 2007/08 retrieval of data and information from the Regional Agricultural Advisors (RAAs) and the District Agricultural and Livestock Development Officers (DALDOs) partly through routine crop monitoring and early warning tools and partly through actual fielding of MAFC teams of experts to eye-witness crop performance in bimodal areas in respect of masika crop for 2007/08 as well as vuli crop for 2008/09. While the former was to establish crop production forecast for 2007/08 crop, the latter intended to rule out or in the vuli contribution to 2008/09 food availability1. Comprehensive analyses covering different retrievals were undertaken and results are presented in this report. The results concentrate on national and regional level food status with brief district level highlights of vulnerable areas.

From the analysis, it has been found that 10,872,336 tonnes of food crops will be available from farm production comprised of 5,587,547 tonnes of cereals<sup>2</sup> and 5,284,788 tonnes of non-cereals<sup>3</sup> (Table 1, Figure 1, Appendix 1 and Appendix 2) and will meet national food requirement amounting to 10,337,981 tonnes of food by 105 percent implying a 534,355 tonnes food surplus (Table 1, Appendix 2).

The 2007/08 production is exped to meet food requirement for 2008/09 by 105%, Iringa, Mtwara, Rukwa, Mbeya, Ruvuma, Kagera, Lindi, Kigoma, Manyara, Dodoma, Morogoro and Tanga where SSR=106-149%. The rest 9 regions are deficit in the order of decreasing levels of SSR=12-99% in Dar es Salaam, Kilimanjaro, Arusha, Mwanza, Shinyanga, Coast, Tabora, Singida and Mara. Furthermore, vulnerability is perceived in 21 districts in 9 regions<sup>4</sup> (Table 1, Figure 3, Appendix 2, Appendix 3 and Appendix 5).

This revises the preliminary forecast released in June, 2008, which indicated that about 10,782,006 tonnes of food crops would be harvested and would meet national food requirement then estimated at 10,341,859 tonnes of food by 104 percent implying a 440,146 tonnes of surplus food. According to Preliminary forecast, vulnerable areas were expected in 29 districts in 14 regions. The observed 0.8% increase in production, meagre though, has been generally attributed to weather pattern in different areas which mainly expressed a positive effect on noncereal crops (2.4%) but a negative effect in most cereals (-0.6%) particularly maize, millets and rice (Appendix 6, Appendix 7). Furthermore, the 2008 vuli performance had a negative impact on 2008/09 food availability and locally estimated to reduce its contribution to total food down to 24% (bimodal perspective) or 13% (national perspective). Under normal circumstances, Vuli crop contributes 32% (bimodal area perspective) or 18% (national perspective) to food crop production (Appendix 4).

An analysis of Carryover stocks (COS) shows that, on the eve of new marketing year a total of 807,304 tonnes food stock was carried over into 2008/09 marketing year of which 96,151 tonnes was held in NFRA premises while 307,501 tonnes was held in private stochists and 403,652 tonnes was estimated as farm retention (Figure 2).

<sup>2</sup> The cereal crops covered under CMEWS include maize, sorghum, millets, rice and wheat.

<sup>3</sup> The non-cereals include pulses, cassava, banana and potatoes

<sup>4</sup> Four of which namely Iringa, Manyara, Morogoro and Tanga were not detected as definitely deficit.

Time series analysis shows that except for pulses, production for all crops stand above respective trend values by percentage values ranging between 1 and 17. While total food produced is 6% above trend value amounting 10.23 million tonnes, cereals and non-cereals are 9% and 3% above trend values 5,117 tonnes and 5,108 tonnes respectively. Trend values for different crops are as per Appendix 7.

# Appendix 1: Tanzania Final Food Crop Production Forecast by Region - 2007/08 (as of 31/12/2008) (Area and Production in Hectares and Tonnes Respectively, Yield in Tonnes per Hectare)
